News Release: Visible® offers Configuration Management on Amazon Web Services (AWS).

BOSTON, MA – June 1, 2015 – Visible Systems Corporation today began to offer Razor®, its configuration management product, on Amazon Web Services. **Razor® Cloud, as it is now called** is an affordable, configurable, and easy to use software configuration management solution hosted on the Amazon Web Services (AWS) cloud server. With Razor® Cloud, you receive a virtual environment that lets you load and/or simply run the Razor software. Available over the Amazon Marketplace, there are two flavors:

- **Flavor 1** – Visible sets up, provides and pays for the Amazon Instance which contains the Razor server. You simply pay a fee for the use of the Razor server and run the Razor clients on your own workstations.
- **Flavor 2** – You launch and pay for your own Amazon Instance which is based on the Razor Amazon Machine Instance (AMI). Upon purchasing a Razor license from Visible you will be ready to manage your own Amazon Instance and clients. The Razor AMI server runs the latest release of Ubuntu with the latest release of Razor.

"I've been using the Razor On-Premise solution for a long time and I wanted to try out their cloud package. It works very well and is very secure. Setting up the server is the same as On-Premise and since I already know how to do it... it was easy." said Al Menendez, Owner, Maximo Consulting, Software Engineer at Space Coast Information Systems, Inc.

For more information, please contact Sales at sales@visible.com or Michael Cesino directly at mcesino@visible.com.

BENEFITS:

- **Flexibility** - With the Razor® Cloud you pay only for the compute power, storage, and other resources you use, with no up-front commitments. You can access as much or as little as you need, and scale up and down as required. In a cloud computing environment, new IT resources are only ever a click away, which means you reduce the time it takes to make those resources available to your developers from weeks to just minutes.
- **Cost Reductions and Reliability** - By using the Razor® Cloud you cut down on costs by reducing the need to invest in and maintain hardware and server infrastructures. Cloud storage eliminates the stress of agonizing, assembling and powering servers.
- **Security** - The Razor® Cloud utilizes an end-to-end approach to secure and harden our infrastructure, including physical, operational, and software measures. Companies such as the NSA and CIA are currently utilizing and recommending the AWS. Razor runs on a FedRAMP approved cloud infrastructure for DoD and other governmental agencies.

About Amazon Web Services: Amazon Web Services (AWS), is a collection of cloud computing services that make up a cloud-computing platform offered by Amazon.com. These services operate from 12 geographical regions across the world: US East, US West, Brazil (São Paulo), Europe (Ireland and Germany), Southeast Asia (Singapore), East Asia (Tokyo, Seoul, Beijing) and Australia (Sydney). Each Region has multiple "Availability Zones", which are distinct data centers providing AWS services. As of December 2014, Amazon Web Services operated an estimated 1.4 Million servers across 28 availability zones.

About Visible Systems Corporation:

Visualize. Align. Transform.™ Visualize patterns, align strategy and transform change into meaningful business outcomes.

Visible Systems Corporation is a leading supplier of integrated configuration management and modeling tools and solutions for enterprise applications, information management and business process re-engineering. For more than 25 years, Visible has been dedicated to providing businesses with model-based solutions and services in conjunction with consulting, education, and support around the world.
